

Mohad Hadi

Software Engineer

Senior Flutter Developer

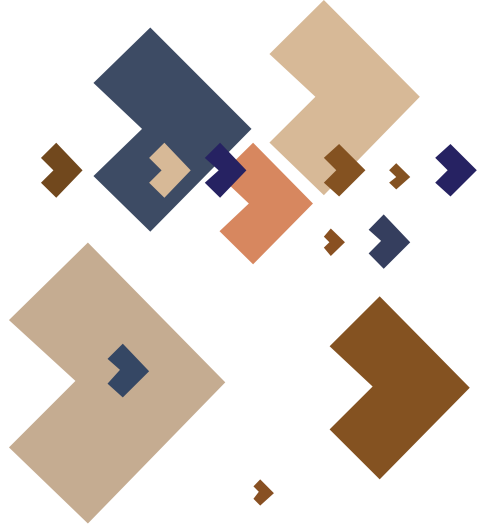

Mobile Development Expert

Born : 1991

BS Software Engineering

Mobile development experience ~ 10 years (Senior)

Live in Iran/Karaj

Main Skills & Expertise

01

Flutter Development

First of all my main stack, and the most loving one is Flutter, I have about 4 years of experience in it, have developed more than 10 applications in Flutter, and also take a position as a flutter team head in a company for about 3 years.

02

Android & iOS Development

As a programmer, I started with native android development with Java, and after years I started developing native iOS in swift too. When Google unveiled Kotlin, I switched to it as soon as possible. I have developed too many applications for many startups as a Native Mobile Developer.

03

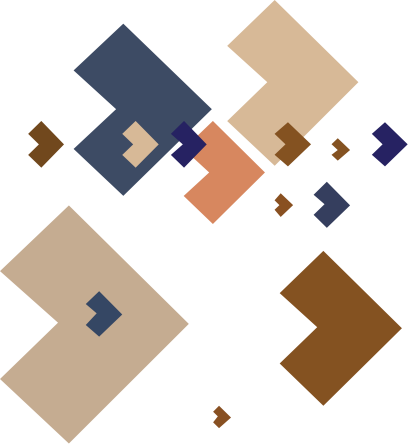

Laravel Developer

As a Freelancer and a team member, I loved participate in backend codes too, so I chose the Laravel framework as my backend stack because it is wonderful and easy. I developed some websites and many APIs with it.

Other Skills:

- Firebase (auth, analytics, crashlytics, dynamic links, push notifications / messaging)
- Optimal code, network handling; dio, offline mode, restful, graphql
- Multi-theme and Multi-language (localization, RTL & LTR support)
- Google maps & Apple maps integration
- User Authentication (Google, Apple, Facebook, Instagram, ext)
- Ecommerce website/application, payment functionality, purchase
- Image processing, Camera, Qr code, Permission manager
- Release your app to stores; GooglePlay, AppStore
- Custom widgets, beautiful Ui kits & complex animations
- Git, ci cd
- Clean Architecture and Clean Code fundamental usage
- TDD development - unit tests, integration tests, UI test
- Android Studio, Xcode, Visual Studio, JetBrains, PhpStorm
- Gradle, Groovy, Cocoapods, Ruby
- Experienced in calendars like Lunar and Solar
- Expert in patterns like; bloc, MVVM, MVP, MVC
- Get_it, Equitable, Sqlite, GetX, GPS

My Work Samples

HeyCal

2020-2022

Role : Flutter Team Head

In Caloria (HeyCal) you can track your diet, goal, weight, exercises, ext. also you can get special diet from doctor and specialist with access to thousands of recipes.

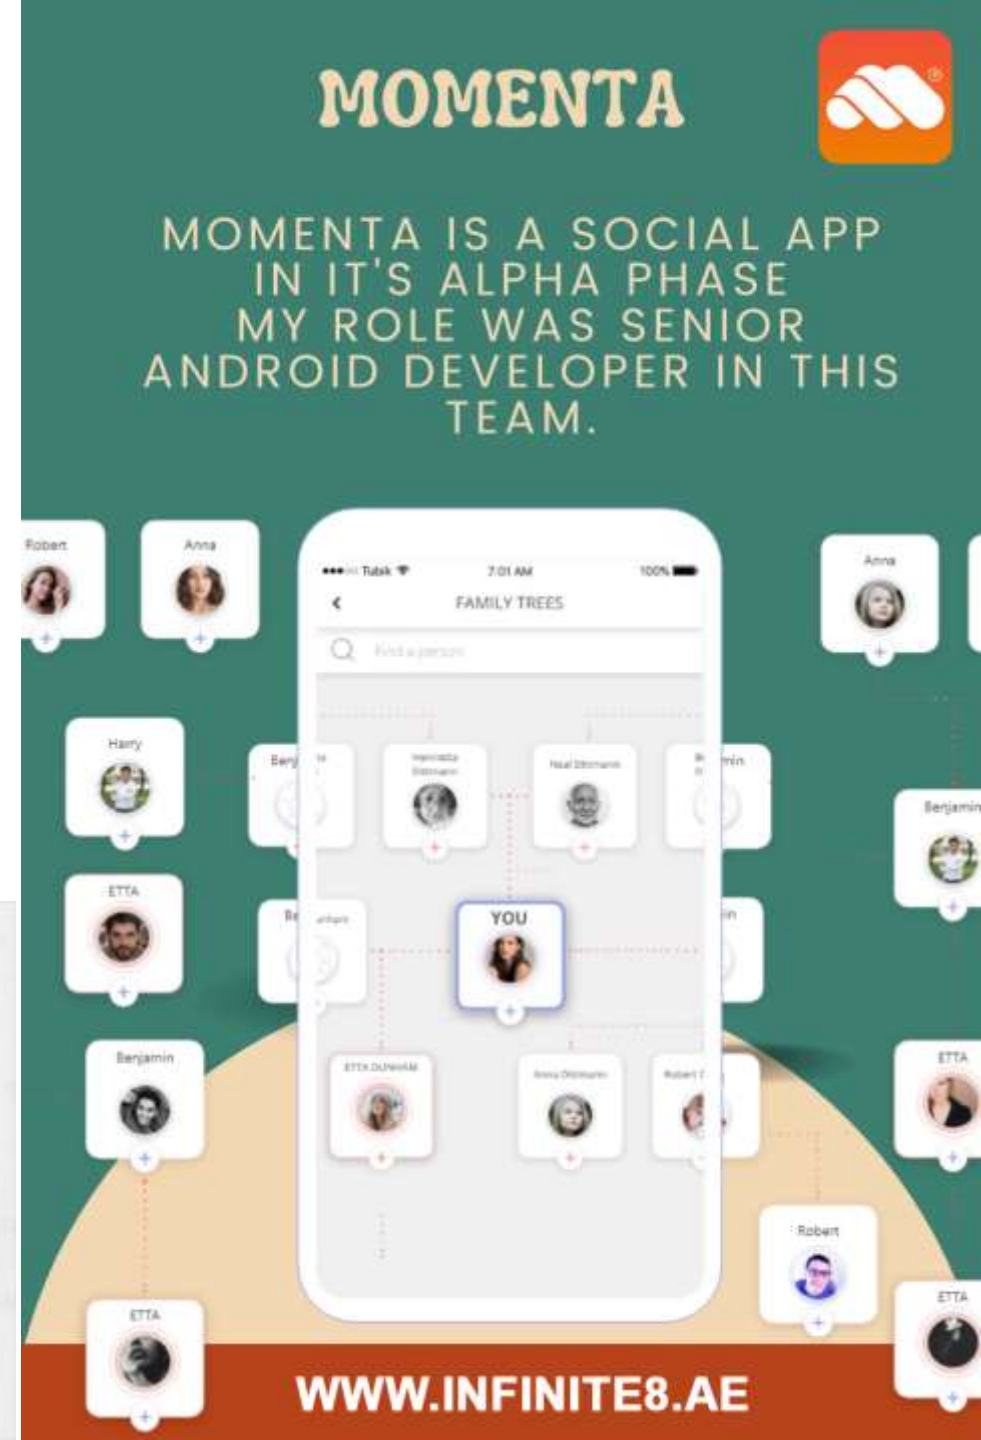

www.caloria.ir

As a team lead, teaching and promoting team members was one of my responsibilities. After that, I should have been very up-to-date with the flutter framework. This project had too many challenges, including complex UI & animations, multi-languages, theming, and technical handling multi applications (normal users and specialists-doctors) from the same source code with multi-platform outcomes. I run ci/cd on GitLab to simplify the testing and deployment of these applications. As I worked there for about three years, different app versions with different UI/UX and challenges have been released until now that aren't visible in the latest version.

Momenta & IranApps.

In 2019 I was a team member of infinite8 in Dubai. The app features are confidential, So I just mention one of the challenges which I have solved in this project. It was about two infinite scroll views that must be synced with each other. Instead of calculating too many factors to achieve this goal I created it by estimating the animation time so the code runs so much faster and smoother than before and made me the hero of the team.

Also work on IranApps application, which was one of the biggest Iran android app stores as a CTO.

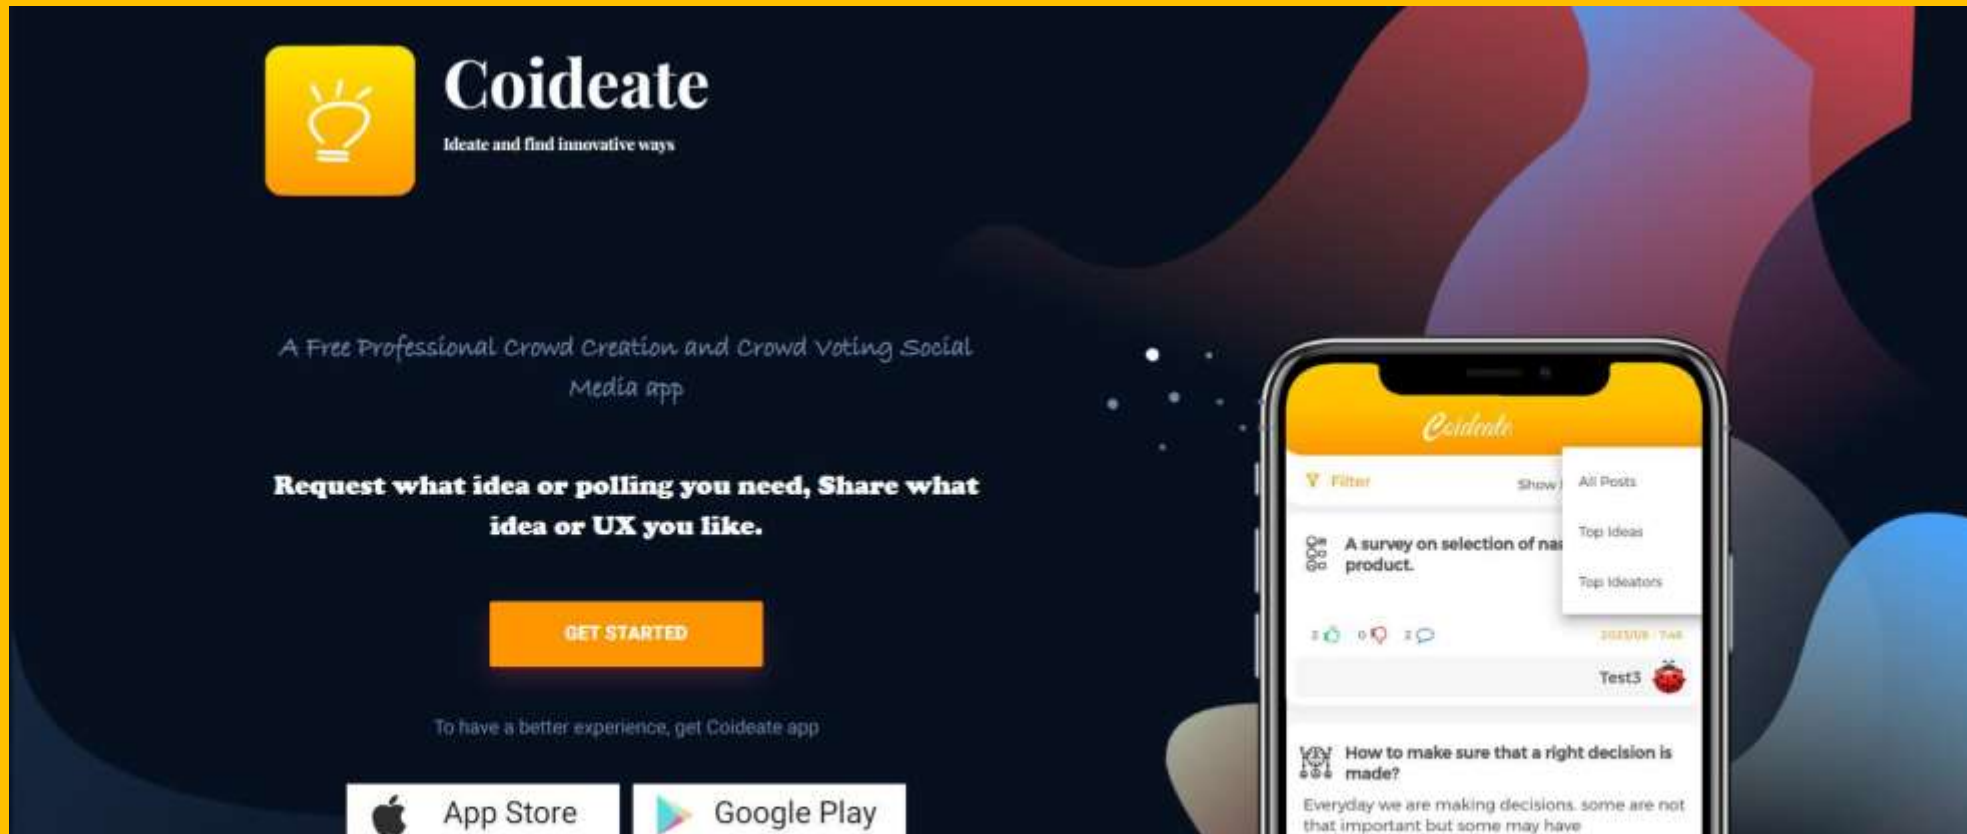

Coideate

Coideate is a service that provides you with an environment to do polling, sharing ideas and extraordinary experiences and request for idea in groups or countrywide/public.

I made the backend with Laravel and mobile applications with Flutter.

WWW.COIDEATE.APP

Mahbod Art Gallery

FullStack Developer

Mahbod Art Gallery application was for a private art gallery that sells video content about teaching paintings. It supports multi-language and multi theme.

This project was made with flutter, it has too many complex animations which evoked a rainbow. It has video streaming and an in-app purchase for payment. Also, the app has free mode too. The back end of the project was with Laravel. And I made an admin panel for it too.

Popularity is a sort of social network application which released for a small group of people for the psychological research and study phase.

I developed the whole software for its organization with flutter and laravel (for its web services and admin panel).

The application gathers data from user experience scenarios and simply analyzes them for more specific results.

The architecture of the software had been with me too.

Popularity

Senior Flutter Developer

In Popularity, you can log in from your social media & select any of your contacts and then rate them in different aspects. Also, you can see your rates and share them with others.

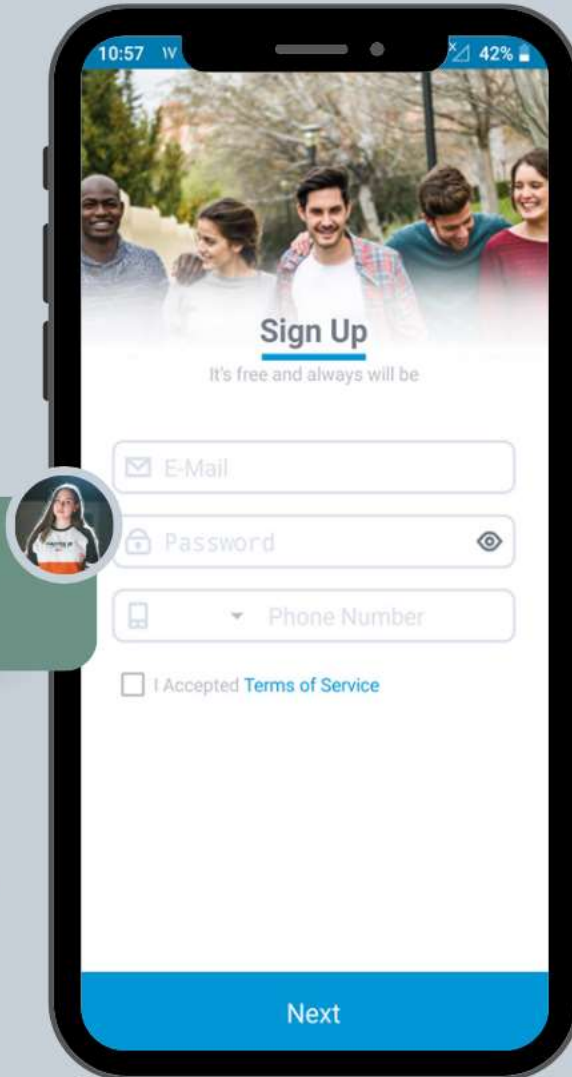

Senior Flutter Developer

Peopley was a social application in which people can share the image of where they visit like Instagram but with some more specific features about tourism and travel.

Hey Chidi Eze how are you doing over there?

I,m fine I'll be home next month wish me luck

In 2018 I worked on the mobile front end of the project Peopley in Flutter.

The challenges were about optimal chat messaging and image processing. I had some challenges when the users wanted to share their own gotten images with others and specify the location on the map or by GPS.

At that time Flutter was a bit new, and useable well-developed packages were not too much, so I had to write some native code for some parts of this project.

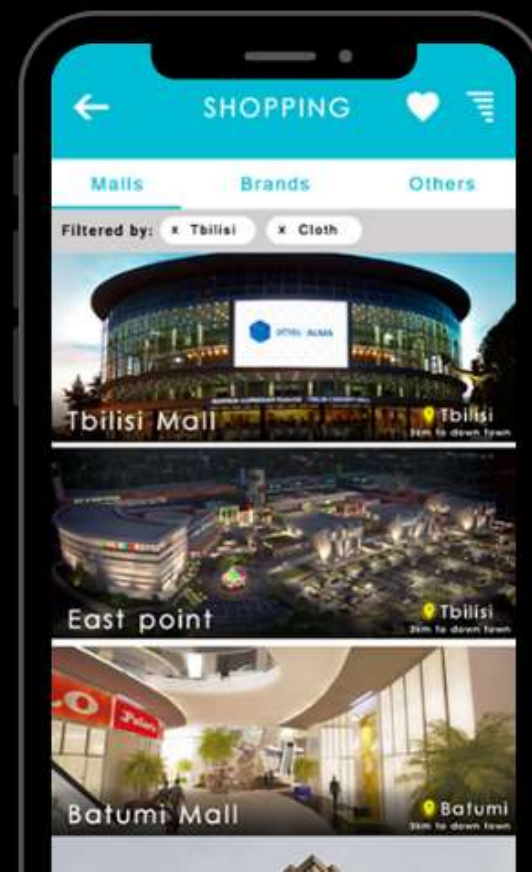

In 2016 I was a Full Stack Developer for a tourism company named 2Shots from Georgia.

I developed the whole software with native android and iOS frameworks and Laravel for the web services and admin panel.

The app has a routing feature with google maps, payments for reservations, and a fantastic search feature for around the user places.

POCKET GEORGIA

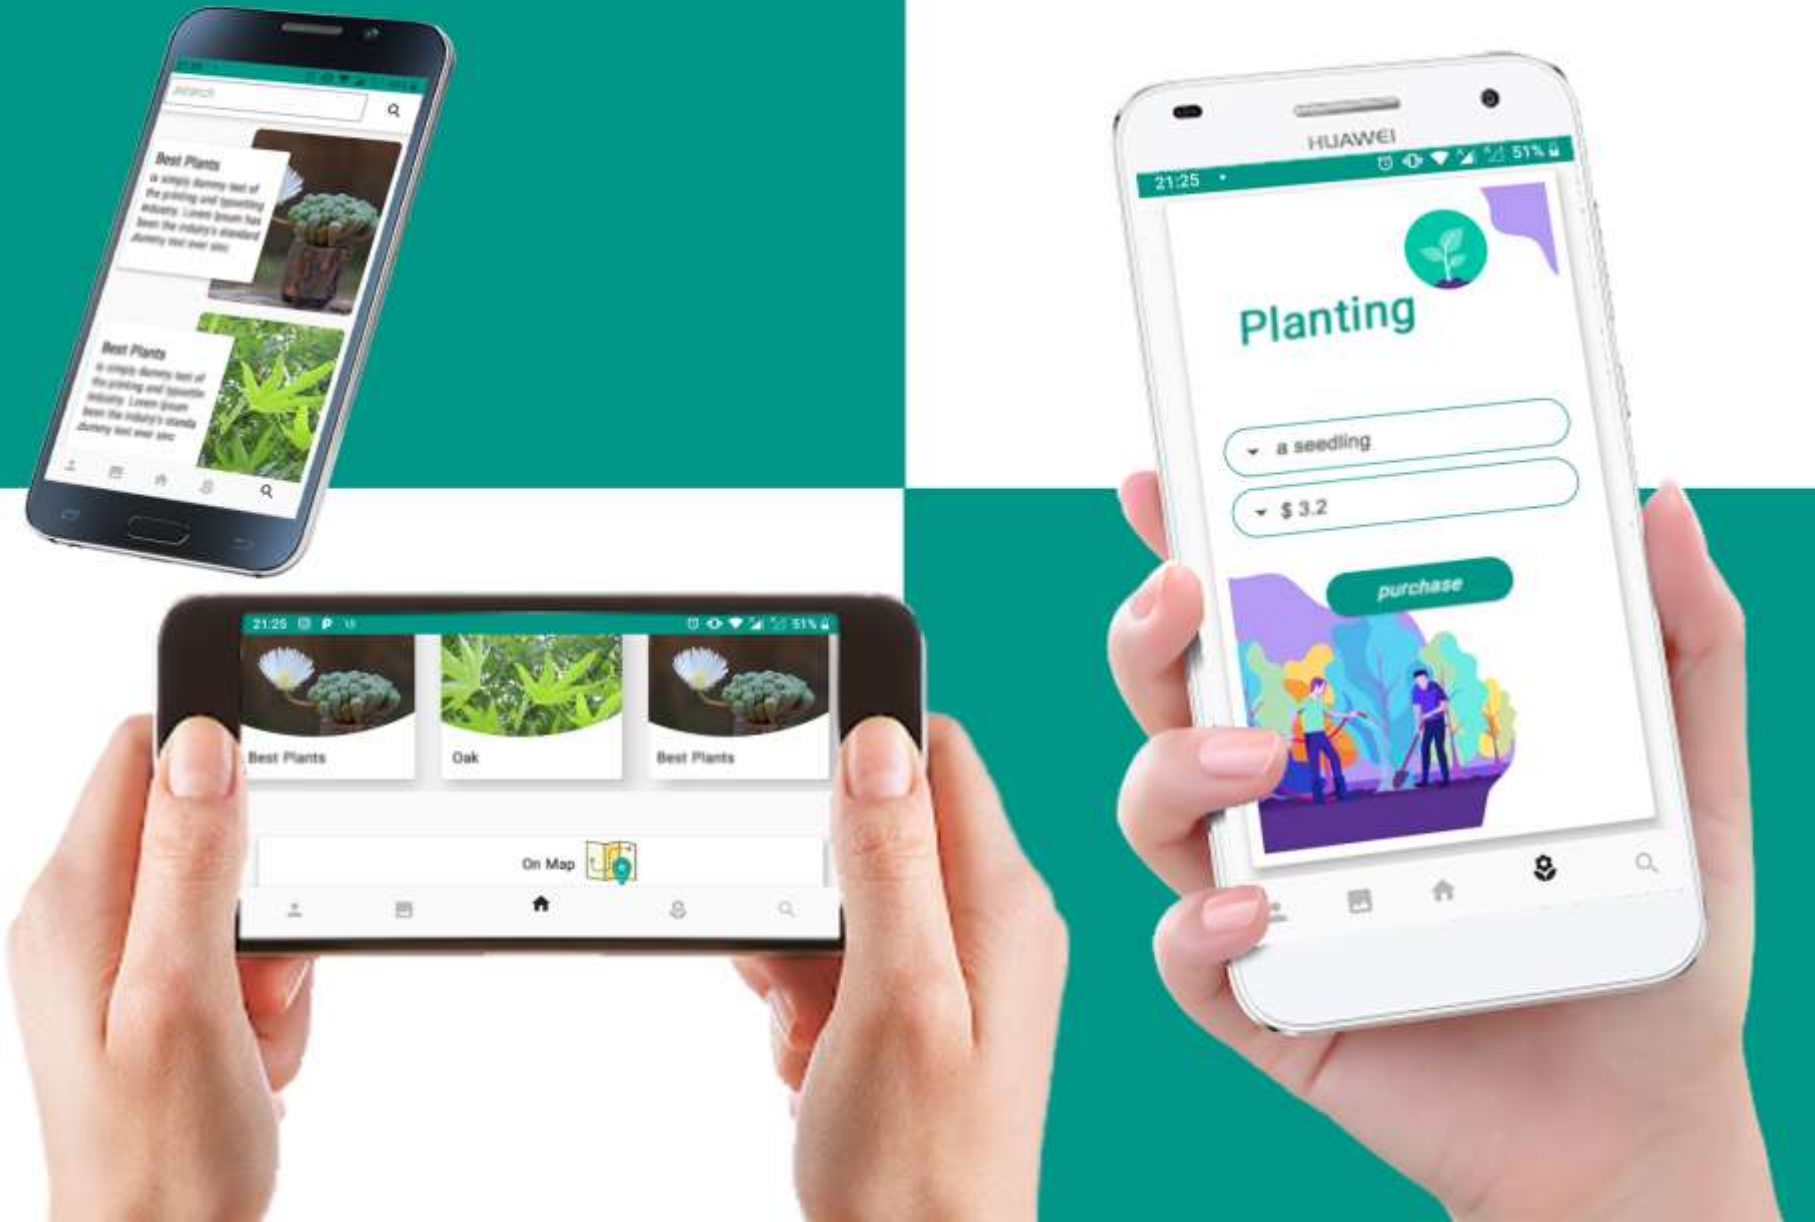

FullStack Developer

Pocket Georgia was an app about tourism and traveling, especially in Georgia. Users can find places, share them and reserve some hotels there.

Planting Seedlings

In 2019, I developed a single application for a non-profit organization with the Flutter framework. It is an open-source software that has stopped providing its services for some time, but considering it was working on improving the environment, I would like to mention it in my resume.

FIX BUGS, MAINTAIN, PUBLISH YOUR FLUTTER MOBILE APPS

SUPPORT & MAINTAIN

All kinds of flutter applications are accepted.
for unlimited time, I will work for you.

BUG FIX

Don't know what is the problem?
let me fix it for you.

PUBLISH TO STORES

Do you have problem in publishing your
android or iOS applications?
I will definitely do it for you.

And many other software in form of mobile applications, websites and so on from 2015 until now.

Quality is what I recognize my code by.

Being on time is my work type characteristics.

And kind and professional people who want to make the world a better place are my clients.
